

The type 6690 is a short subminiature medium-mu double triode capable of operation in the video region. This type is characterized by stable performance under severe environmental conditions. It is designed for service where extreme conditions of mechanical shock, vibration, and acceleration are to be encountered.

MECHANICAL DATA

GENERAL

Style	subminiature
Cathode	cold cathode
Bulb	T-3
Base	ES-10; Subminiature Button Flexible Leads
Outline	
Bearing	36/G
Connections	
Lead 1 - #2 plate	Lead 5 - #1 plate
Lead 2 - #2 grid	Lead 6 - heater
Lead 3 - heater	Lead 7 - #1 grid
Lead 4 - #2 cathode	Lead 8 - #1 cathode

Maximum Diameter	0.400 inch
Maximum overall bulb length	1.000 inch
Minimum Lead Length	1.500 inches
Mounting Position	any

RATINGS (1)

Maximum Impact Acceleration (2)	880 g
Maximum acceleration parallel to axis of the tube (3)	10,000 g
Maximum acceleration perpendicular to axis of the tube (4)	1500 g
Maximum vibration acceleration	15 g
Maximum bulb temperature	250°C

ELECTRICAL DATA

GENERAL

Direct Interelectrode Capacitance (5)	
Grid to Plate (each section)	1.5 2.1 μ uf
Input (each section)	2.0 3.2 μ uf
Output	
Section 1	1.0 1.8 μ uf
Section 2	1.4 2.2 μ uf
Heater Voltage (ac or dc)	6.3 volts
Heated Current	100 ma

RATINGS (1) Absolute Values

Heater Voltage (7)	6.3 ± 10% volts
Max. Plate Voltage (dc)	120 volts
Max. Plate dissipation	
(each section)	1.1 watts
Max. Heater Cathode voltage	± 350 Vdc

CHARACTERISTICS (each section)

Conditions	
Heater Voltage	6.3 volts
Plate voltage	100 volts
Cathode Bias Resistor	100 ohms
Plate Current	9.0 ma
Transconductance	4800 mhos
Amplification Factor	35
Maximum Grid Voltage for 30 ma	
Plate Current	-10.5 volts
Noise Output voltage (sections connected in parallel) (8) max. 100 mv post centrifuge	

Life Expectancy

30°C Ambient Temperature 500 hours

from JETEC release #1445,
April 18, 1955

NOTES

- (1) Limitations beyond which normal tube performance and tube life may be impaired.
- (2) Forces in any direction as applied by the Navy Type High-Impact (Fly weight) Shock Machine for Electronic Devices, or equivalent (Hammer angle = 60°).
- (3) Forces as produced in a centrifuge with bases of the tube toward or away from the center of rotation. Maximum force to be applied within 20 seconds.
- (4) Forces as produced in a centrifuge at a one inch radius, 7500 rpm, for a duration of 3 min.
- (5) Vibrational forces in any direction at 40 cycles per second.
- (6) With external shield of 0.405 inch diameter connected to cathode of section under test.
- (7) Tube life and reliability of performance are directly related to the degree of regulation of the heater voltage to its center-rated value of 6.3 volts.
- (8) Across plate resistor of 2,000 ohms with applied vibrational acceleration of 15g at 40 cycles per second. CK = 100 μ f; RK = 100 ohms; Plate supply impedance not to exceed that of a 40 μ f capacitor.
